Special Effects!!

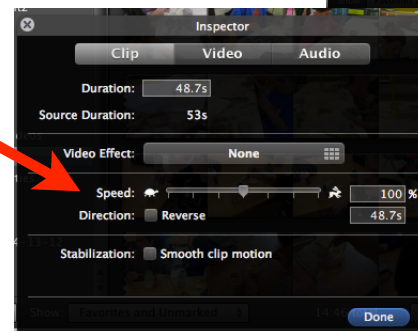

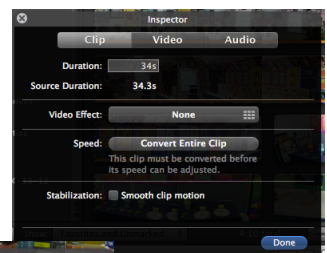

## Add a Video Effect

1. Click on the wheel at the bottom of the clip
2. Click “Clip Adjustments”
3. The inspector window will pop up. Next to “Video Effect” , Click where it says “None”
4. The inspector window now changes to show you all the possible video effects (black and white, sepia, negative, etc.) if you hover your mouse over different effects, it gives you a preview of how it will look.
5. Click on a Video Effect you like
6. Press Done

## Slow or Fast Motion

1. Click on the wheel at the bottom of the clip
2. Click “Clip Adjustments”
3. The inspector window will pop up, Click “Convert Entire Clip” this will take a minute or so
4. Now next to **Speed** you will see a slider with a turtle, or a rabbit. Slide the dot to the turtle to slow it down, the rabbit to speed up the clip!
5. Press Done

Special Effects!!

## Add a Freeze Frame

1. Move your cursor to a spot in the clip that you want to freeze
2. CONTROL Click on the clip
3. You will now see options on the clip:  
Click "Add Freeze Frame"
4. This automatically adds a still frame, like adding a photo.  
It usually will be around 5 seconds.
5. Click the wheel of the clip
6. Click "Clip Adjustments"
7. Change the duration if you want it to be longer/shorter than 5 seconds.  
Type 3s into the duration box.

↑ This is the freeze frame clip, it's now added in the middle.

## Freeze Frame with Effects

To make this look even cooler...

Add an effect to the freeze frame image

Click and drag a title above the freeze frame

## Ken Burns

Ken Burns is an effect that adds a little zoom to a photo or a freeze frame

1. Click on the wheel
2. Click "Clip Adjustments"
3. Click "Cropping and Rotation"
4. On the top of the preview window, click where it says Ken Burns
5. This allows you to change the Start and End of an area (where the image starts and where it zooms in a little bit). The duration of the clip also determines how fast the zoom goes.

This is a clip with a freeze frame, a video effect, a title, and Ken Burns!

Try it!!!
